

TOOLS EVERY REMOTE WORKER NEEDS!

FOR TEAM CHAT

[Slack](#)

Slack is more than a tool for chatting—it's almost a religion. If the hilarious gifs and useful chatbots don't hook you, the endless array of integrations that will cut down on your emails most certainly will. Kindly join the 6th floor slack channel [here](#)

[Workplace by Facebook](#)

Facebook just launched this team collaboration platform that includes messaging, voice and video calling, and newsfeed features to help teams work together more efficiently.

MEETINGS & VIDEO CHAT

[Google Hangouts](#)

Google Hangouts is the default tool of choice for video meetings. Slack even lets you launch a hangout right from within a channel!

[Zoom](#)

An alternative to Hangouts, Zoom has a higher threshold for the number of people who can be in a meeting at once.

[Youtube Live](#)

Need to record a quick video? How about host a live broadcast or training for your team?

YouTube Live is Google Hangout's alternative to scaling a broadcast globally.

[Join.me](#)

Great app for screen sharing and team calls. It doesn't freeze up as often as other tools do which makes it a great choice for quick meetings on the fly.

PROJECT MANAGEMENT

[Asana](#)

Project and task management abound in Asana, works particularly well for remote teams because of all the options available to manage and track tasks.

[Trello](#)

Trello's ease of use makes it not just a great tool for project and task management but also leading remote product feature prioritization sessions! It's got a great mobile app, too.

PRODUCTIVITY

[Todoist](#)

My to-do list app of choice, Todoist manages to toe the fine line between simple enough to use quickly while still boasting a ton of customizable options.

[iDoneThis](#)

iDoneThis is an interesting tool for remote teams who want to keep tabs on each others' progress.

DEV AND DESIGN

[GitHub](#)

This is the ultimate tool for developers to host their code online. Not a developer? GitHub is also the site of choice for many company wikis.

[InVision](#)

InVision is a great tool for building prototypes and sharing them with your team. Contextual comments make collecting feedback a snap.

[Cloud9](#)

A development environment in the cloud featuring its own code editor and an Ubuntu workspace.

[Sketch](#)

This app by Evernote allows remote teams to annotate, markup, and quickly sketch out ideas. You can get it for your desktop, tablet, and phone and get to work no matter where you are.

[CodePen](#)

Write and share HTML/CSS & JavaScript on the fly! Share with your remote team members and preview your code/get feedback in real time.

CLOUD STORAGE & COLLABORATION

[Box](#)

More than just cloud storage, Box is a cloud collaboration tool of choice. Also check out Box's extensibility.

[Google Drive](#)

Google Drive needs no introduction. Store and collaborate on documents, spreadsheets, presentations, and more all with your Google Account.

QUICK FEEDBACK

[Chimp or Champ](#)

Managing a remote team and want to get a sense of their happiness levels? Chimp or champ is a quick tool designed to do just that and allows teams to provide feedback as well, much like an old school suggestion box.
